

**Medium soft compact resin binder, suitable for corrected grain, smooth, upper and split leather****CHARACTERISTICS:**

Chemical Composition	:	A compact binder based on polyacrylate & other special additive
Aspect	:	Viscous, Milky white dispersion
Active Matter	:	35% ± 1
Film nature	:	Medium soft
pH-Value (10% Soln)	:	7.5 - 8.5
Ionogenicity	:	Anionic
Storage Capacity	:	6-9 months when properly stored.

PROPERTIES & APPLICATION:

VICOSIN 2216 is a compact and dull resin binder, imparts good elasticity with excellent covering and thus specially suited for splits and full grain, corrected grain and all types of upper leathers.

VICOSIN 2216 is completely non-tacky produces smooth and dull film, hides grain defects, hence it upgrade the selection as well as better cutting value of the leather.

To obtain better result, it is suggested to use **VICOSIN 2216** in combination with Vicosin 2234 & a little anionic PU along with a little wax emulsion and protein binder.

The use of **VICOSIN 2216** alone or in combination with other polyacrylate is depends upon type of finishes and result required.
